

SightSpan Security

Fingerprint-secured portable storage device

Product Opportunity Highlights

- Protects Sensitive Information
- Prevents Unauthorized access
- Convenient Fingerprint interface
- Portable Data Security
- Operating System Agnostic
- New revenue channel
- Rugged, durable design
- Biometrics has a positive consumer impression
- Multi-user function

The SightSpan Security SafeEHR addresses the growing concern over unauthorized access to digital sensitive personal records. Millions of Americans are affected by theft of personal data at cost of billions to consumers.

EHR allows for the secure storage and transfer of sensitive consumer information. Data including high resolution pictures, financial information, medical information can all be safely stored and such information on the device can only be retrieved by the persons authorized by the biometric authentication platform.
