SightSpan's AppsAnyplace is a fully managed Hosted Virtual Desktop and application delivery solution that enables an end user's desktop and applications to be virtualized, centralized, and managed, all while being delivered securely from an AT&T Data Center.

Our virtual desktop services are delivered "as-a-service" to users anywhere on any device. This means subscribers can use whatever device they choose — laptop, tablet, smart phone — but still access familiar Windows desktops and business applications wherever they may roam.

SightSpan delivers solutions that include 24 x 7 x 365 monitoring and management support for the entire infrastructure that would be leveraged for the delivery of virtual desktops.

Our solutions typically include many of the following features:

- Dedicated Private Cloud Environment

- Virtualized Network, Security and Storage Layers

- Implementation in AT&T SSAE 16 Data Centers

- End User data to be stored outside of the VDI environment – Integration with SightSpan DataAnyplace

- Patching of the Infrastructure and Desktop OS

- Anti – Spam / Anti Virus

- Profile Management and User Personalization
- 2 Factor Authentication

- Private Network Connectivity

- Monitoring Toolsets and Portal for Reporting

- 24 x 7 x 365 Helpdesk support
